This is an introductory course to Paediatric Habilitation. The course is for Audiologists who are beginning to work in paediatric hearing aid clinics, or who would like an update on current protocols. The speaker faculty are experienced clinical staff, and the course focuses on skills for effective clinical intervention.

The course covers all aspects of routine paediatric hearing aid clinics, including strategies for testing, hearing aid provision with limited threshold information, RECD, verification and outcome measures, wireless accessories, and multi-disciplinary teams.

The course will be of interest to professionals who work with audiologists and who wish to gain an insight into paediatric hearing aid clinics.

On the final morning there is a workshop on paediatric hearing aid technology and RECD measurements. The following manufacturers are involved:

Oticon & EduMic, GN Hearing, Phonak - paediatric hearing aid range and features.

The Phonak Roger™ system - demonstration and discussion.

Natus, Interacoustics, WS Audiology - RECD measurements on this equipment.

The course does not cover advanced practice or paediatric assessment techniques.
